ABSTRACT

This study aimed to determine the effect of product quality and social media marketing on brand image and purchase decisions. This research was conducted in Pekanbaru, Riau. The population in this study was all the people of Pekanbaru, so using the Roscoe formula, the sample was set at 120 people using the accidental sampling method. Data analysis using multiple linear regression. Research results information that (1) product quality has a positive and significant influence on brand image, (2) social media marketing has a positive and significant influence on brand image.

Keywords: Product Quality; Social Media Marketing; Brand Image; Purchase Decisions

INTRODUCTION

The cosmetics industry is one of the fastest-growing sectors both in the world and in Indonesia. Indonesia has experienced significant growth in recent years. Based on data from the Ministry of Industry, the growth of the cosmetics market in Indonesia reaches around 9% to 10% per year; this figure is higher than the average growth of other manufacturing sectors. The growth of the cosmetics market value in Indonesia from 2019 to 2024 shows a consistent increase. In 2019, the total value of the cosmetics market was around 1.20 billion USD. This value continues to increase every year, reaching 1.94 billion USD in 2024. This growth is driven by increasing people's purchasing power, changes in lifestyle patterns, and the increasing use of social media as a platform for promoting cosmetic products (S. Chandra et al., 2023).

One of the cosmetic brands that plays a role in this market growth is Viva Cosmetics. Viva Cosmetics is known for its skincare and beauty products, and Viva Cosmetics has built a reputation as one of the trusted brands among Indonesian consumers. Over time, Viva Cosmetics continues to grow and meet the needs and preferences of the local market and uses quality ingredients in its products (Hidayat et al., 2022; Faujaini et al., 2024). Despite its long history and widely recognized products, Viva Cosmetics has faced challenges in recent years. Based on Top Brand Index (TBI) Data, Viva Cosmetics shows a downward trend from 2019 to 2024. Although there was an increase in 2023, there was another very significant decline in 2024 of 3.50%, this shows that Viva Cosmetics sales are declining, and one of the factors causing this is low consumer purchasing decisions. If consumers are not interested in buying (Goh et al., 2022), product sales will decline. Low purchasing decisions are also caused by brand image (Jackson et al., 2021; Reinaldo & Chandra, 2020). A strong brand image can increase purchasing decisions because consumers tend to trust and have a positive experience with the brand.

Brand image and purchasing decisions are influenced by product quality. If the product is of high quality, consumers will tend to associate the brand with positive things, improving the overall brand image which will then strengthen the brand image and encourage purchasing decisions. Based on research conducted by Cahyani and Sutar (2020) and Roswardianto and Purwanto (2021), shows that product quality has a positive effect on brand image. Meanwhile, Ais-Tsauri et al., (2022) showed that product quality has a negative effect on brand image. Then based on research conducted by Priyadi et al., (2024) and Wirosoo and Sornisoni (2021) showed that product quality has a positive effect on purchasing decisions. Meanwhile, Nadiya and Wahyuningih (2020) showed that product quality has a negative effect on purchasing decisions.

Social media marketing also has a significant influence on brand image and purchasing decisions (Wijaya et al., 2020). When consumers feel that the value they receive is commensurate with the cost incurred (Arif et al., 2021), consumers tend to share their positive experiences through social media, which ultimately influences purchasing decisions. The more effective the marketing strategy used, the stronger the relationship between the brand and the consumer, thereby improving brand image and encouraging purchasing decisions. Based on research conducted by Narayana and Rahartha (2020) and Tuti and Dwiyanti (2022), shows that social media marketing has a positive effect on brand image.

LITERATURE REVIEW

Purchasing Decisions

A purchasing decision is a thought process in which individuals evaluate various alternatives and determine a choice of a product from several available options (Yusuf, 2021).

According to Lysia et al., (2022), purchasing decisions can be measured through several indicators, namely: (1) according to customer needs, (2) product benefits, (3) accuracy in purchasing products, (4) repeat purchases.

Brand Image

Brand image is a consumer perception that is formed through personal experience and information from various sources, such as reviews, friend recommendations, or advertisements. This perception is dynamic and can change over time according to market changes and consumer preferences (Adnan and Silihouse, 2021). The brand image describes the perceptions that consumers or customers have (Jusadi et al., 2024), including the business's view of the entire organization and certain products (Kenneth and Donald, 2018).

Product Quality

Product quality is the level of a product's ability to fulfill the functions expected by consumers, product quality is also assessed by the extent to which the product can fulfill the promises and expectations given by the brand to its consumers (Santoso, 2019). Product quality is a combination of all product characteristics produced through the marketing process, production engineering, and maintenance, to produce goods (products) that are by the needs and uses of consumers (Wijaya, 2011).

Social Media Marketing

Social media marketing is a combination of internet-based information technology and interaction between individuals that aims to create new value. Social media marketing is a marketing activity that can be carried out by various groups, from startup entrepreneurs to large companies, and even students (Charli and Putri, 2021). Social media marketing is an internet marketing model designed to achieve marketing goals through participation in social media networks. With this approach, companies can reach consumers on frequently used online social platforms and provide opportunities to build closer relationships with consumers (Mulyan et al., 2014).

According to Oktiyar⁹ et al., (2021), five main indicators in social media marketing are important to measure, namely: (1) entertainment, (2) interaction, (3) tendiness, (4) customization, (5) advertisement.

Relationship Between Variables and Hypotheses

The Effect of Product Quality on Brand Image

Product quality includes everything offered by the manufacturer to be noticed, used, purchased, and consumed by consumers. The product must be by the specific needs of certain consumers (Astuti and Motondang, 2020). The higher the product quality perceived by consumers, the more positive the brand image formed in the minds of consumers. If consumers feel that Viva Cosmetics products have good quality, such as satisfactory results and attractive packaging, then consumers will associate the Viva Cosmetics brand with a positive image.

⁴ The research of Cahyani and Satar (2020) and Reoandianto and Purwanto (2021) concluded that product quality has a positive effect on brand image.

H1: Product quality has a positive effect on the brand image of Viva Cosmetics products in the Pekanbaru city community

The Effect of Product Quality on Purchasing Decisions

Overall product quality includes various characteristics and properties that affect the product's ability to meet consumer expectations (Hocky et al., 2020). Good product quality can attract consumer interest, and by providing new variants, manufacturers can further increase the product's appeal to customers (Rosyidi et al., 2020). The higher the consumer's perception of product quality, the greater the consumer's decision to buy the product. If consumers feel that Viva Cosmetics products have good quality, such as proven effectiveness and quality ingredients, they will be more likely to choose the product over other products.

The research of Priyadi et al., (2024) and Wirawan and Setiawan, (2021) concluded that product quality has a positive effect on purchasing decisions.

H3: Product quality has a positive effect on the purchasing decision of Viva Cosmetics products in the Pekanbaru city community.

Social media marketing is the use of technology, channels, and social media software to build communication, convey messages, exchange, and offer value to stakeholders in an organization (Sharma and Kumar, 2018). Marketing strategies through social media will affect the product's brand image. If consumers feel involved with the brand through interesting content and consistent interactions on social media, they will associate the product with a good brand image so that it can strengthen the brand image of the Viva Cosmetics product and increase positive perceptions in the market.

The research of Nuryono and Rahmatia (2020) and Tuti and Dwiyanti (2022) concluded that social media marketing has a positive effect on brand image.

H2: Social media marketing has a positive effect on the brand image of Viva Cosmetics products among the people of Pekanbaru City.

Social media can also be used to encourage consumers to express their opinions about a product or service offered and share them on online social networks. Social media marketing can increase awareness among other consumers who read the reviews or opinions, which in turn can influence their views on the market and the products or services offered (Pileiro et al., 2016). When consumers see reviews and recommendations about Viva Cosmetics products shared on social media, consumers become more aware of the product and get the information they need to make a purchasing decision. Positive reviews and testimonials from other users serve as a form of social recommendation that can strengthen the desire of potential buyers to try the product.

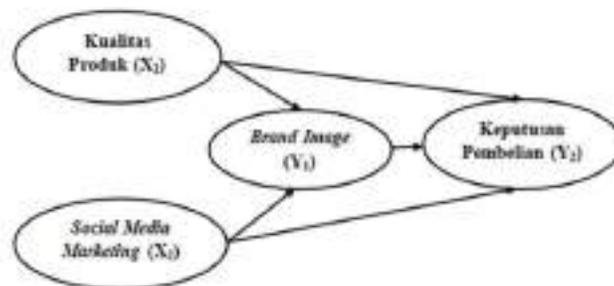

H4: Brand image has a positive effect on purchasing decisions for Viva Cosmetics products in the Pekanbaru city community.

The Influence of Brand Image on Purchasing Decisions

Brand image is the way a brand introduces the identity of the product it offers to customers, which distinguishes the product from competitors' products (Suryoto and Halibrata, 2020). A positive and strong brand image shapes the way consumers view the product and feel confident in its quality. When Viva Cosmetics products have a good brand image, consumers will be more confident in buying the product because they feel that the product has been proven to be of quality and reliable.

H5: Brand image has a positive effect on purchasing decisions for Viva Cosmetics products in the Pekanbaru city community.

Research Framework

METHODOLOGY

Research Design

This research is quantitative research. The population of this study is consumers who have made purchases or plan to make purchases on Viva Cosmetics products in Pekanbaru City whose number cannot be known with certainty, so with the Roscoe formula the sample is set at 159 people with the accidental sampling method. Data analysis using multiple linear regression.

Data Analysis Techniques

The data analysis carried out includes: (1) Descriptive analysis consisting of respondent characteristic analysis and respondent response analysis. (2) Research instrument test consisting of (a) Reliability Test, is a questionnaire test carried out with the aim of measuring the consistency of respondents' answers. The instrument is considered reliable if the Cronbach Alpha value > 0.60. (3) SEM-PLS Analysis Test includes (a) Path diagram and structural equation, (b) Evaluation Model Test (c) Hypothesis test.

RESULT AND DISCUSSION

Based on the R-Square value in Table 2, there is a strong relationship between exogenous and endogenous variables. For example, the R-Square value of 0.845 (84.5%) indicates that the brand image variable is explained by the product quality, social media marketing, and purchasing decision variables, while the remaining 15.5% is influenced by other factors not examined in this study.

Table 3. Hypothesis Test Results

Hypothesis	Relationship of Variables	Original sample (O)	T statistic (O/STDEV)	P value	Hypothesis Results
H1	Product Quality (X1) -> Brand Image (Y1)	0.888	12.307	0.000	Positive and significant influence
H2	Social Media Marketing (X2) -> Brand Image (Y1)	-0.655	0.658	0.255	Negative and insignificant influence
H3	Product Quality (X1) -> Purchase Decision (Y2)	0.514	5.294	0.000	Positive and significant influence

Discussion

The effect of product quality on brand image

Product quality is the totality of features and characteristics of a product or service that has the ability to satisfy stated or implicit needs and is the level of ability of a product to carry out its functions (Ariawati and Suryadi, 2021). Brand image is a perception that arises in the minds of consumers when remembering a brand from a certain product line (Firmanayudi, 2019).

The influence of social media marketing on brand image

Social media marketing is an interactive marketing communication activity between companies and customers and vice versa to create sales of products or services from the company (Nurik et al., 2019).

Based on research from Narayana and Baharutha (2020) and (Tuti & Dwiyanti, 2022) concluded that social media marketing has a positive effect on brand image, in contrast to research by Usari and Sugiat (2023) which concluded that social media marketing has a negative effect on brand image. Although Viva Cosmetics follows trends, consumers do not only follow trends, but create trends so that they can reduce the attractiveness of the brand in the eyes of consumers.

The effect of product quality on purchasing decisions

Product quality is the ability of a product to meet customer desires (Gusriwan, 2022). Purchasing decisions are choosing from several alternative choices, either between two or more than two choices. When making a decision, a person must be able to determine one of the other alternatives. If someone decides to buy because they are faced with a choice between buying or not buying, this is called a decision-making position (Sudaryono, 2016). This is supported by a descriptive analysis of respondents' responses to the statement, "I feel that Viva Cosmetics products have very good durability in everyday use". So that consumers who feel that the product is durable and effective for long-term use will increase their purchase decisions. The better the quality of the product offered, the higher the tendency of consumers to buy the product.

Social media marketing involves a process in which individuals utilize social media channels to promote websites, products, or services (Fathani & Albari, 2022). A purchasing decision is a person's attitude to buy or use a product, either in the form of goods or services that are believed to satisfy them and the willingness to bear the risks that may arise (Prasad et al., 2019).

So even though marketing on social media runs smoothly, it will not affect purchasing decisions because interactions on social media tend to be more about communication than direct transactions. Respondents are more interested in information and entertainment than making purchases.

The influence of brand image on purchasing decisions

A purchasing decision is an act of buying a brand that consumers like the most, but two factors can be between purchase intention and purchase decision (Kotler and Armstrong, 2010).

The ease of buying products either directly or online will facilitate consumers in the purchasing process and increase purchasing decisions.

CONCLUSION

Conclusion

Based on the results of the research that has been conducted, the following conclusions can be drawn: (1) Product quality has a positive and significant influence on brand image (2) Social media marketing has a negative and insignificant influence on brand image.

Recommendations

Based on the conclusions obtained in this study, the suggestions that are expected to be useful are as follows: (1) Viva Cosmetics needs to improve product quality to strengthen brand image and support purchasing decisions. Social media strategies must be optimized to be more attractive and relevant in improving brand image and influencing purchasing decisions. (2) Replacing social media marketing variables or adding new variables such as experiential marketing, brand experience, and advertising awareness.
